GREEN FOSSIL PTE LTD

Table of Contents

1. Executive Summary

This report provides an overview of the Vulnerability Test Assessment conducted for Green Fossils' Church Management System, addressing the OWASP Top 10 security risks. The assessment aims to identify and evaluate vulnerabilities in the company's web application and infrastructure which enables informed decision-making to enhance the overall security posture.

This scan was executed by: Scanned by: admin

Ommitted Scans:
bruteforceForced_browsinginjectionsessionReplayoverinformative_errorrobots_txt

Each risk category was examined thoroughly and vulnerabilities were identified and classified based on their severity. The key findings and recommendations from the assessment are summarized below. The vulnerabilities identified in the Vulnerability Test Assessment Suite for Green Fossils' digital assets pose significant risks to the company's operations, reputation, and bottom line. Ignoring or delaying the remediation of these vulnerabilities can lead to a range of detrimental business impacts.

2. Scan Results

The raw scan results will be provided upon delivery.

3. Our Findings

The results from the credentialed patch audit are listed below. It is important to note that not all identified hosts were able to be scanned during this assessment – of the 300 hosts identified as belonging to the SAMPLE-INC domain, only 100 were successfully scanned. In addition, some of the hosts that were successfully scanned were not included in the host list provided.

4. Risk Assessment

This report identifies security risks that could have significant impact on mission-critical applications used for day-to-day business operations.

Critical Severity	Medium Severity	Low Severity
0	0	0

High Severity Vulnerability

0 were unique high severity vulnerabilities. High severity vulnerabilities are often harder to exploit and may not provide the same access to affected systems.

Severity	Vulnerability Type	Checked at

Medium Severity Vulnerability

0 were unique medium severity vulnerabilities. These vulnerabilities often provide information to attackers that may assist them in mounting subsequent attacks on your network. These should also be fixed in a timely manner but are not as urgent as the other vulnerabilities.

Vulnerability	Description	Solution

Low Severity Vulnerability

0 were unique low severity vulnerabilities. These vulnerabilities are not as serious as other vulerabilities but might be used by attackers in rare cases.

Vulnerability	Description	Solution

5. Recommendations

Recommendations in this report are based on the available findings from the credentialed patch audit. Vulnerability scanning is only one tool to assess the security posture of a network. The results should not be interpreted as definitive measurement of the security posture of the SAMPLE-INC network. Other elements used to assess the current security posture would include policy review, a review of internal security controls and procedures, or internal red teaming/penetration testing.

Remediation

Taking the following actions across all hosts will resolve 96% of the vulnerabilities on the network:

Action to Take	Description
